Silver 25 Low E	Yes	Yes	No	No	No	Yes	Yes	No	No	No
Silver 20 OSW	Yes	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	No
Stainless Steel 25 OSW	Yes	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	No

Window films work by reflecting, absorbing, transmitting and re-radiating solar radiation. Applying window film causes the glass to expand more than without window film. This variance in temperature creates stress on laminate, wired and some tinted glass, can cause the glass under certain circumstances to fracture or fail. It is therefore important to ensure compatibility by fitting the correct film to your glazing. To distinguish if your glass is toughened or not, you should be able to find a kite mark in one or the corners, ask your glazing company the type of glass installed or contact us for further advise.
